An Evaluation of Solar Air Heating at United States Air Force Installations

By David S. Brown

Biblioscholar Nov 2012, 2012. Taschenbuch. Book Condition: Neu. 246x189x13 mm. This item is printed on demand - Print on Demand Neuware - The purpose of this research was to evaluate the use of solar air heating at United States (U.S.) Air Force installations. Specifically, this thesis analyzed Unglazed Transpired Collector (UTC) technology, more commonly known as SolarWalls . This thesis sought to determine if UTC systems are an economically and environmentally viable technology which Air Force energy managers should include in their portfolio of alternative energy options. This research question was answered through the use of case studies and life-cycle cost analysis. Case studies were performed at various U.S. military installations which have already utilized UTC systems to provide a consolidated source of lessons learned. A life-cycle cost analysis was performed to quantify the potential cost savings at various Air Force installations to help Air Force energy leaders determine if the technology should be further implemented, and if so, which installations should be considered for future UTC use. The quantitative results of this evaluation determined that the Air Force could realize significant economic and environmental benefits from the use of UTC technology. The information gathered from case studies can help...

Reviews

It is an awesome publication which i actually have ever read through. it had been writtern really properly and valuable. I found out this book from my i and dad recommended this pdf to discover.

-- **Doyle Schmeler**

This book is definitely not simple to begin on studying but quite fun to see. I actually have read and that i am sure that i will gonna read through yet again once again in the foreseeable future. It is extremely difficult to leave it before concluding, once you begin to read the book.
