Complications of IE include stroke, organ damage, secondary infections, heart failure, and almost certain death if infected valves are not replaced and/or aggressively treated with antibiotics. A significant risk factor for IE is intravenous drug abuse. Some individuals respond well to aggressive antibiotic therapy; however, others require early or even emergent surgery. Recurrent IE is common in intravenous drug abusers (IVDAs). This paper addresses the ethical dilemma associated with repetitive valve replacements in patients who use injection drugs. 12 pp. Englisch.
