

Hydrogeology of the Stratified-Drift Aquifers in the Cayuta Creek and Catatonk Creek Valleys in Parts of Tompkins, Schuyler, Chemung, and Tioga Counties, New York: Usgs Scientific Investigations Report 2012-5127

Filesize: 2.33 MB

Reviews

A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be he best ebook for possibly.

(Mitchell Kuhn III)

HYDROGEOLOGY OF THE STRATIFIED-DRIFT AQUIFERS IN THE CAYUTA CREEK AND CATATONK CREEK VALLEYS IN PARTS OF TOMPKINS, SCHUYLER, CHEMUNG, AND TIOGA COUNTIES, NEW YORK: USGS SCIENTIFIC INVESTIGATIONS REPORT 2012-5127

To save **Hydrogeology of the Stratified-Drift Aquifers in the Cayuta Creek and Catatonk Creek Valleys in Parts of Tompkins, Schuyler, Chemung, and Tioga Counties, New York: Usgs Scientific Investigations Report 2012-5127** eBook, remember to refer to the web link below and save the file or gain access to additional information which are have conjunction with HYDROGEOLOGY OF THE STRATIFIED-DRIFT AQUIFERS IN THE CAYUTA CREEK AND CATATONK CREEK VALLEYS IN PARTS OF TOMPKINS, SCHUYLER, CHEMUNG, AND TIOGA COUNTIES, NEW YORK: USGS SCIENTIFIC INVESTIGATIONS REPORT 2012-5127 ebook.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.The surficial deposits, areal extent of aquifers, and the water-table configurations of the stratified-drift aquifer systems in the Cayuta Creek and Catatonk Creek valleys and their large tributary valleys in Tompkins, Schuyler, Chemung, and Tioga Counties, New York were mapped in 2009, in cooperation with the New York State Department of Environmental Conservation. Well and test-boring records, surficial deposit maps, Light Detection and Ranging (LIDAR) data, soils maps, and horizontal-to-vertical ambient-noise seismic surveys were used to map the extent of the aquifers, construct geologic sections, and determine the depth to bedrock (thickness of valley-fill deposits) at selected locations. Geologic materials in the study area include sedimentary bedrock, unstratified drift (till), stratified drift (glaciolacustrine and glaciofluvial deposits), and recent alluvium. Stratified drift consisting of glaciofluvial sand and gravel is the major component of the valley fill in this study area. The deposits are present in sufficient amounts in most places to form extensive unconfined aquifers throughout the study area and, in some places, confined aquifers. Stratified drift consisting of glaciolacustrine fine sand, silt, and clay are present locally in valleys underlying the surficial sand and gravel deposits in the southern part of the Catatonk Creek valley. These unconfined and confined aquifers are the source of water for most residents, farms, and businesses in the valleys. A generalized depiction of the water table in the unconfined aquifer was constructed using water-level measurements made from the 1950s through 2010, as well as LIDAR data that were used to determine the altitudes of perennial streams at 10-foot contour intervals and water surfaces of ponds and wetlands that are hydraulically connected to the unconfined aquifer. The configuration of the water-table contours indicate that...
