It is straightforward in go through easier to recognize. I actually have study and that i am sure that i will going to study yet again again down the road. Once you begin to read the book, it is extremely difficult to leave it before concluding.

Ross1: I have made something like 50 tons of that pig iron electrically by adding to the ores enough carbon to reduce the oxide of iron and not the titanitic acid, and, under a moderate current, it can be effected exactly as you get it in a blast furnace without practically any titanium, not more than two or three hundredths of 1 per cent. (0.02-0.03), to possibly 0.05 per cent. With proper currents I have also made alloys--ferro-titanium, containing 10 to 80 per cent. titanium (with or without carbon), by using either carbon or an aluminum bath as reducer. I have some specimens of such alloys, as also of curious electric furnace products. If the Society is interested to see them, I will be pleased to exhibit them, as suggested by the Secretary. So far as concerns the extent of the deposits that Mr. Lody--guine spoke about, nobody can realize what they are without seeing them. Right in Elsex County I have seen a deposit of iron 600 feet wide, and you can follow it for 2,000 feet, within a few feet from the surface. Millions of tons could be quarried in an open quarry. The ores contain from 57 to 60 per cent. of metallic iron, with some 15 per cent. titanitic acid....
